# National Data Warehouse

## An Overview for Clinicians and Managers

---

- Why Do We Need National-level Data?
- Why a DW?
- DW Design
- User Benefits
- Timeline
- The Future

6

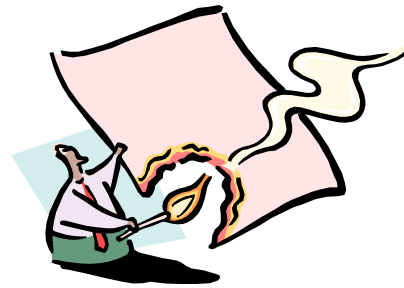

## Why Do We Need National Data?

- Requests for information are ever increasing
- These ever increasing requests will likely continue
- But our resources will not increase commensurate to these increased demands

7

## Why Do We Need National Data?

- By deriving information from existing data, data that are already being collected for other purposes,

we can reduce local data collection burdens and bureaucratic overhead at all levels

8

## Why Do We Need National Data?

Information means money

- GPRA is tied to budget requests
- Funding for special needs
  - Racial disparities
  - Diabetes
- ORYX and JCAHO accreditation

9

## Why Do We Need National Data?

National level data can improve clinical care

- Patient safety

10

## Why Do We Need National Data?

Information provides program direction

- Needs assessment
- Resource allocation
- Outcome performance
- Facility planning

11

## National Data Warehouse

### An Overview for Clinicians and Managers

- Why Do We Need National-level Data?
- ➔ ■ Why a DW?
- DW Design
- User Benefits
- Timeline
- The Future

12

## What kind of a repository do we need?

- We have conflicting needs.

13

## We need more data...

The breadth of information needs is increasing

- Statistical
- ORYX
- Epidemiology
- Diabetes
- Pharmacy
- Cost management
- Bioterrorism
- etc.

14

### ... in one, all-inclusive repository...

One central collection point for all data

- Verify integrity of data
- Analyze and provide feedback on
  - Timeliness of data
  - Data quality
  - Unexpected deviations from historical norms
- Maintain a "single version of historical truth"
- Maintain all the information content of the data

15

### ... but ...

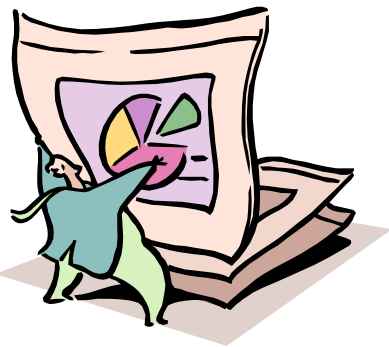

- One large information repository becomes just too unwieldy for reporting

16

### ... we need focused, efficient DBs...

We need efficient, user friendly access to data

- Ease of user access
- Search-efficient DB structures
- Subsets of data – just what we need for specific uses
- Transformed data

17

### ... still, on the other hand...

But data marts alone just cannot maintain the

- Flexibility
- Granularity
- Scalability
- Power

that will be required to meet all needs now or in the future

18

... because we have to accommodate the future.

The architecture has to be able to accommodate change, inevitable change.

There will be future needs for information that even the most astute among us cannot now anticipate.

19

Why Do We Need National Data?

- We need one, large, replete, and powerful *data warehouse database*,
- that provides information to more focused, user-friendly, search-efficient *data marts*.
- We need a ***data warehouse environment***.

20

# National Data Warehouse

## An Overview for Clinicians and Managers

- Why Do We Need National-level Data?
- Why a DW?
- ➔ ■ DW Design
  - User Benefits
  - Timeline
  - The Future

21

## The Dilemma...

- We need a complete, all-inclusive solution and we needed it yesterday
- But to plan, build, and implement a complete solution would take far, far too long and would not deliver incremental value to our users along the way

22

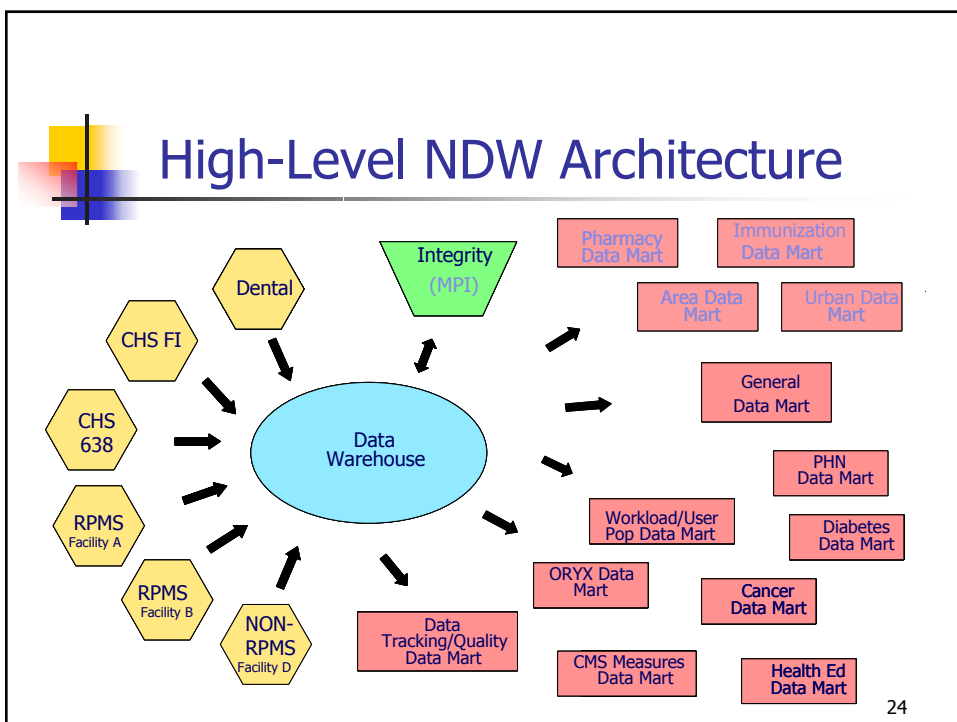

## The Solution

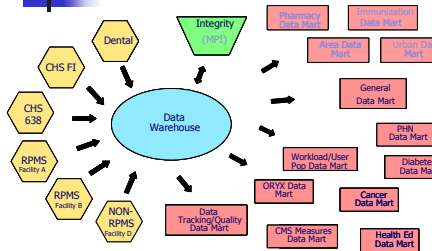

A cartoon illustration of a person in a purple shirt and yellow pants riding a large blue shark. The person is holding a flag and a spear, and the shark is breaching the water. This represents the 'The Solution' slide.

- Build the data warehouse environment in increments that deliver value to users at each step
- The most critical user needs will be addressed first

23

## The DW1 Environment Will...

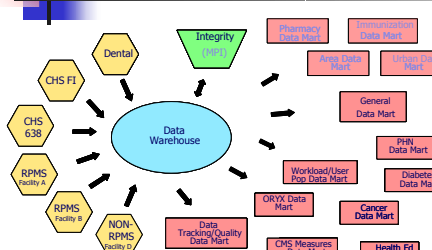

The diagram illustrates the DW1 Environment. A central blue circle labeled "Data Warehouse" is the hub. To its left, several yellow hexagons represent data sources: "Dental", "CHS FI", "CHS 638", "RPMS Facility A", "RPMS Facility B", and "NON-RPMS Facility C". Arrows point from these sources to the Data Warehouse. Above the Data Warehouse is a green triangle labeled "Integrity". To the right of the Data Warehouse, numerous red rectangles represent "Data Marts". Arrows point from the Data Warehouse to these marts. The Data Marts include: "Pharmacy Data Mart", "Communication Data Mart", "Area Data Mart", "General Data Mart", "PHN Data Mart", "Diabetes Data Mart", "Cancer Data Mart", "Health Ed Data Mart", "CHS Measures Data Mart", "Data Tracking/Quality Data Mart", "ORXX Data Mart", "Workload/User Pop Data Mart", and "Pain Data Mart".

- Accept registration and encounter-based patient data...
- ...from sites using RPMS or other IT systems...
- ...and CHS data from the Fiscal Intermediary and Area databases.

25

## The DW1 Environment Will...

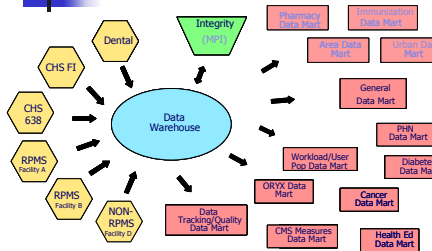

The diagram illustrates the DW1 Environment. A central blue circle labeled "Data Warehouse" is the hub. To its left, several yellow hexagons represent data sources: "Dental", "CHS FI", "CHS 638", "RPMS Facility A", "RPMS Facility B", and "NON-RPMS Facility C". Arrows point from these sources to the Data Warehouse. Above the Data Warehouse is a green triangle labeled "Integrity". To the right of the Data Warehouse, numerous red rectangles represent "Data Marts". Arrows point from the Data Warehouse to these marts. The Data Marts include: "Pharmacy Data Mart", "Communication Data Mart", "Area Data Mart", "General Data Mart", "PHN Data Mart", "Diabetes Data Mart", "Cancer Data Mart", "Health Ed Data Mart", "CHS Measures Data Mart", "Data Tracking/Quality Data Mart", "ORXX Data Mart", "Workload/User Pop Data Mart", and "Pain Data Mart".

- Employ healthcare industry standards (HL7) for data transport and messaging ...
- ...employing an Integration engine to route those data from sites to the proper destinations (e.g., the DW, an Area database).

26

## The DW1 Environment Will...

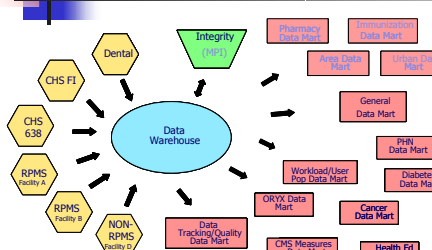

The diagram illustrates the DW1 Environment. A central blue circle labeled 'Data Warehouse' is the hub. To its left, several yellow hexagons represent data sources: 'Dental', 'CHS FI', 'CHS 638', 'RPMS Facility A', 'RPMS Facility B', and 'NON-RPMS Facility C'. To its right, a green triangle labeled 'Integrity' is connected. Surrounding the central hub are numerous red rectangles representing 'Data Marts'. These include: 'Pharmacy Data Mart', 'Communication Data Mart', 'Anest Data Mart', 'Urology Data Mart', 'General Data Mart', 'Pain Data Mart', 'Diabetes Data Mart', 'Cancer Data Mart', 'Health Ed Data Mart', 'CHS Measures Data Mart', 'Data Tracking/Quality Data Mart', 'ORX Data Mart', 'Workload/User Pop Data Mart', and 'RPMS Facility A' through 'C'.

- Collect and store information almost exactly as it is received from the field ...
- ...maintaining historical snapshots of those data...
- ...maintaining as much of its informational content, as possible.

27

## The DW1 Environment Will...

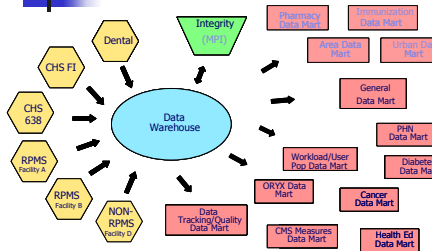

The diagram illustrates the DW1 Environment. A central blue circle labeled 'Data Warehouse' is the hub. To its left, several yellow hexagons represent data sources: 'Dental', 'CHS FI', 'CHS 638', 'RPMS Facility A', 'RPMS Facility B', and 'NON-RPMS Facility C'. To its right, a green triangle labeled 'Integrity' is connected. Surrounding the central hub are numerous red rectangles representing 'Data Marts'. These include: 'Pharmacy Data Mart', 'Communication Data Mart', 'Anest Data Mart', 'Urology Data Mart', 'General Data Mart', 'Pain Data Mart', 'Diabetes Data Mart', 'Cancer Data Mart', 'Health Ed Data Mart', 'CHS Measures Data Mart', 'Data Tracking/Quality Data Mart', 'ORX Data Mart', 'Workload/User Pop Data Mart', and 'RPMS Facility A' through 'C'.

- Provide accurate and helpful information about the data it receives to our field colleagues:
  - Record counts
  - Timeliness of data
  - Less than expected counts based on historical benchmarks
  - Missing data in fields, erroneous codes

28

## The DW1 Environment Will...

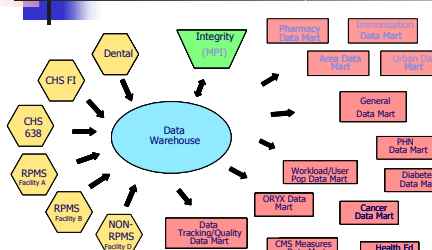

The diagram illustrates the DW1 Environment. A central blue oval labeled "Data Warehouse" is the hub. To its left, several yellow hexagons represent data sources: "Dental", "CHS FI", "CHS 638", "RPMS Facility A", "RPMS Facility B", and "NON-RPMS Facility C". To its right, a green pentagon labeled "Integrity" is connected. Surrounding the central hub are numerous red rectangles representing data marts, including: "Pharmacy Data Mart", "Communication Data Mart", "Area Data Mart", "Urban Data Mart", "General Data Mart", "PHN Data Mart", "Diabetes Data Mart", "Cancer Data Mart", "Health Ed Data Mart", "CHS Measures Data Mart", "ORYX Data Mart", "Workload/User Pop Data Mart", and "Data Tracking/Quality Data Mart".

- Supply data to various data marts from which more targeted information can be gathered
  - Workload/User Pop
  - Data Tracking/Quality
  - Outcome measurement (ORYX, GPRA)
  - Organizational units (Area, Urban)
  - Programs (diabetes, cancer, health education, public health nursing, epidemiology, dental, pharmacy)

29

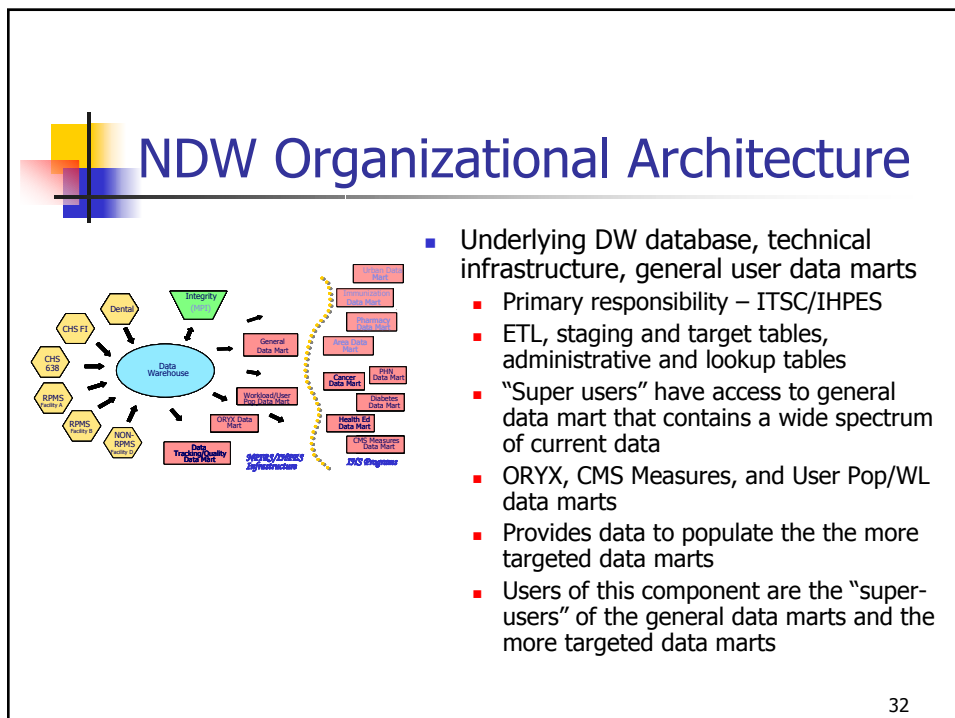

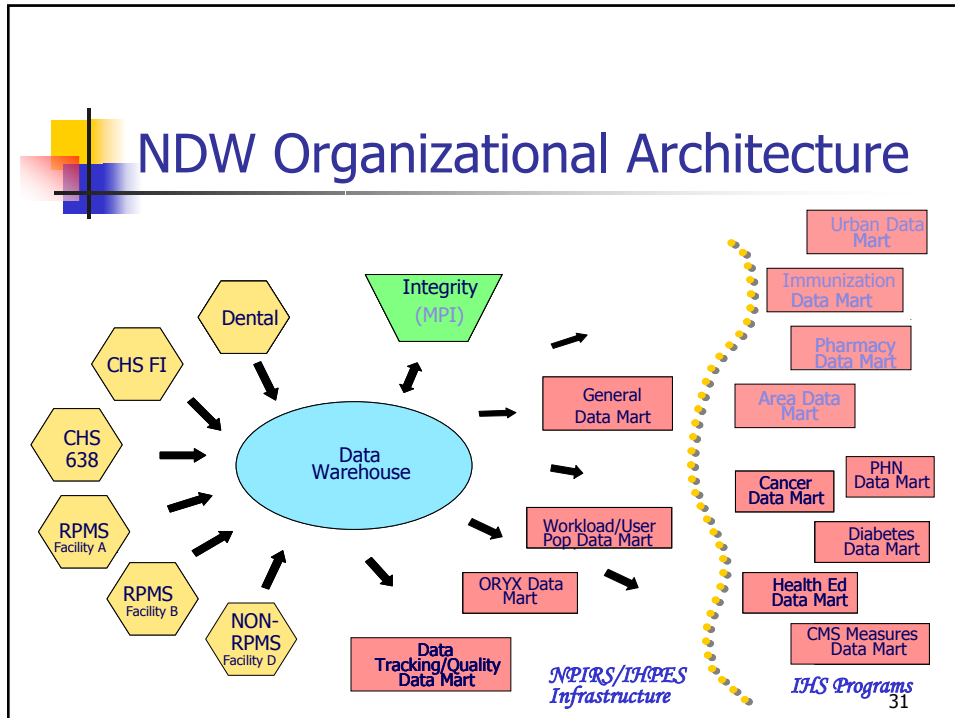

## The DW1 Environment Will...

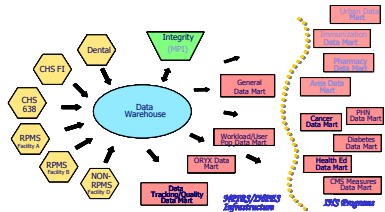

The diagram is identical to the one on slide 29, showing the central "Data Warehouse" connected to various data sources on the left and a variety of data marts on the right.

- Use a "probabilistic matching application to resolve by individual across facilities..."
- ...and use a more complete "Master Person Index" application, when available.

30

## NDW Organizational Architecture

The diagram illustrates the NDW Organizational Architecture. At the center is a blue oval labeled "Data Warehouse". To its left, several yellow hexagons represent source systems: "CHS FI", "Dental", "CHS 639", "RPMS", "RPMS", "NON RPMS", and "CHS 639". To the right of the Data Warehouse, a green triangle labeled "Integrity" points towards it. Below the Data Warehouse, a red rectangle labeled "General Data Mart" is connected. Further right, a yellow dashed line separates a group of red rectangles representing specialized data marts: "Workload/User Log Data Mart", "Cancer Data Mart", "PHN Data Mart", "Cancer Data Mart", "Health Ed Data Mart", "Cancer Research Data Mart", "Data Training/Quality Data Mart", and "Data Training/Quality Data Mart". Below these, a blue rectangle labeled "Surveys/Outcomes Infrastructure" is connected to the "Data Training/Quality Data Mart".

- "Component-ized" targeted data marts
  - Primary responsibility – programs, disciplines, organizational units
  - ITSC "hosts" the infrastructure, provides the security protocols, etc.
  - Very specific, limited subsets of data
  - Emphasis on search efficiency
  - May pull data from general data marts rather than DW database itself
  - Main focus are pre-structured reports
  - Users of this component are the programs, disciplines, organizational units

33

## National Data Warehouse

### An Overview for Clinicians and Managers

- Why Do We Need National-level Data?
- Why a DW?
- DW Design
- ➔ ■ User Benefits
- Timeline
- The Future

34

## Benefits for our Users

- Improved report accuracy because of improved linking between registration and encounter records
- More confidence in data - better able to verify reports with local data
- Improved data tracking and data quality assessment tools
- Better able to report patient "outcomes"
- Better support for Areas' performance measurements, health status assessments, and surveillance

35

## Benefits for our Users (cont.)

- Better consistency among reports - a rigorously gathered, verified, and maintained "single version of truth"
- Lessened local burdens in producing GPRA measures
- More choices for ORYX users
- More information available for Tribal EPI Centers
- Better information to support Diabetes monies

36

## National Data Warehouse

### An Overview for Clinicians and Managers

- Why Do We Need National-level Data?
- Why a DW?
- DW Design
- User Benefits
- ➡ ■ Timeline
- The Future

37

## DW1 Timeline

- Began final initial data load on April 2004
- Integrated step-wise loading and testing over 9-10 months
- Include historical load of data (encounters dated October 1, 2000 to present)
- Run in parallel with current production systems (NPIRS & ORYX) until testing complete
- Legacy systems will be used for
  - FY 2004 WL/UP reports
  - ORYX reports through the April 30, 2005 report
  - All other production reports through Spring 2005
- NDW1 will be used for
  - FY 2005 WL/UP reports
  - July 31, 2005 ORYX reports
  - Other production reports starting mid summer 2005

38

## National Data Warehouse

### An Overview for Clinicians and Managers

- Timeline
- ➔ ■ The Future

39

## Future Directions

- Many, many *more data marts*
- *More detailed encounter data* (e.g., labs, meds, measurements, patient education)
- Data from *additional sources* (e.g., Vital Statistics, CMS, Renal Network)
- *New types of patient-related clinical data* (problem list, surgical history, allergies)
- *Other types of data* (claims, purchase orders, community, geographic locations, employee)
- *Better unduplication* of related data from more than one source
- *Enhanced data quality, error, and tracking reports*
- *Archiving* system
